

SMITHS Dual Gauges

Bulb Types

Dual gauges with a temperature scale have an ether filled bulb fitted at the end of the armoured capillary tubing.

There are two main types (pictured on the left); A2 and K, these are important when deciding which gauge is required. They cannot be easily adapted because they fit into the engine block.

A2 Bulbs

A2 Bulb has a tapered seating and a 5/8" UNF Male Nut

K Type Bulbs

K Type has 3/8" BSP female nut, either supplied with (31-363-415) 3/8 BSP Male to 5/8 UNF Male or (31-363-472-00) 3/8 BSP to 3/8NPT depending on the gauge part number.
